

Kidney Stone

Kidney Stones are a reminder that women handle pain better than men.

Giving birth and kidney stones cause pain not soothed by any Zen.

They've been around since biblical times, so we're told, "This too shall pass,"

But if you ask me a kidney stone is just a freakin' colossal pain in the ass!

Passing a stone means days or weeks of pain, not much doctors can do,

You always tell your friends to "hang in there," until it happens to you.

Then you ask for powerful drugs or an ultrasound to break them up,

And you're so sick and tired of peeing in a little dixie cup.

Once they pass, relief comes quick and the pain finally goes away,

But, until that time comes, you simply live in agony day to day.

How a thing so small could cause such an awful panicked pain,

Is further proof size doesn't matter, that's the lesson of this game.
